Wifi scanner app for android free download

If having a wrist worn status symbol with a great gleaming screen doesn't give you enough incentive to buy a smartwatch, you need apps. Just like smartphones, a watch without them is a shell. However, while there are more than 1.5 million apps available for Android phones, Android Wear has just a few thousand. And nearly 40% of them are looking at faces and other bits of customization. So where's the good stuff? We've been using Android Wear watches since we first appeared, and whether you're wearing the classic Moto 360 or Nuelg Urbane, these are smartwatch apps that we think you should check out. One of the few apps that can really justify Android Wear Watch is what you don't know for Citymapper.this is an amazing travel app that tells you how long it will take to go somewhere and exactly how you can get there using public transport. Unless you live in London, Birmingham or Manchester, that's (at least in the UK). The wear version gives quick orders on how to get home or work from wherever you're done, and supplies instructions on more complex routes using your mobile phone. Free. Download CityMapper It was one of the earliest Android Wear apps, but since then Google Keeping has really come into its own. As before, you can see the list and tick-off created on your phone. Now you can also dictate notes and as long as you connect to your phone, or stored Wi-Fi networks (if you're using a Wi-Fi-enabled clock) they can be written in writing. It is undoubtedly one of the best wrist bound organisers currently around. Not every great Google feature comes preinstalled on wear, you know. Free. Download Google Keep Loving Periscope? Can't get enough of Snapchat? Cord communication is the next strain of the app. Unlike a lot of shared platforms, it's all about audio. You catch a screen-wide button to start recording, making it perfectly suited for any Android Wear watch. The only issue: how many people do you know on the cord? You only need a couple of ready friends to get on-board to make it worthwhile, but it might require a bit of an effort. Free. Download Cord is a way to let android wear apps a hint that Todoist is still one of the best to-do list apps. Don't get us wrong: The mobile phone Todoist app is a corker, but Android wear is a very limited. It is dead basic. Load the app and you can add new tasks to a current list by talking to the clock. More useful, though, is the watch from mobile phones, which appear like notifications being able to send a list of tasks. It's perfect for shopping lists, packing for holidays, and much more. Free. Download Todoist smartwatches are the best in tasks that all take about, oh, five seconds. If we want to read something long, we will get out of the phone. Or, in cases of dire need, crack a Open. But an Android wear watch is great for catching headlines. WeaRSS lets you add your favorite RSS feeds to your app interface, so you can read And a brief summary of articles. Then you can mark the ones you want to read later with a quick flick 'n' tap gesture. It's a good way to wait a 90 seconds for a lift or dinner sandwich that's a bit more enjoyable. Free. Download WeaRSS Fancy Making Your Watch Sweat? You can turn it into a full web browser with the help of this app. And it really feels like a mobile phone web browser crammed onto your wrist. Yes, sometimes it can feel like trying to fit a whole group of forex students into a London phone box: kind of weird and wrong, but in a slightly comic way. If you learn to adopt search terms instead of using slide-y virtual keyboard, it's practical. Suddenly browsing on your wrist isn't as crazy as it sounds. Free. Download web browser for Android Wear Humans don't need a smartwatch, but they need to eat. Why didn't the two come together? TripAdvisor works just like a mobile app or website, allowing you to check out restaurants, attractions and hotels. All about being on-the-fly use, it lists the results by how far they are from their current situation. Choose a place and then you can see a quick summary of user reviews. It doesn't go too far, though, leaving you to take mobile out of pocket if you want to read the full text of rants about your local dad Johns.Free. Download TripAdvisor Most smartwatch games are beyond awesome. They see developers holding you for reasons of playing the game, and usually give you a display that changes a bit when tapping on the screen. Solitaire wear is different, though. This classic card game we know and love, is in all its glory. It's not a cut, you don't care to wait three hours between turns and it really works, as long as you have a smartwatch with a large-enough screen. A smartwatch game that's really fun? Who would have thought? Free. Download Solitaire Wear Google's fitness platform isn't quite yet, but it's an ever-improving app that looks great and tracks fundamentals like steps and calories. All data is then synced to your phone or PC for further observation. Free. Download Google Fit Google like it's previously intended to wear watch watch just emails, messages and so on seemed to be an extension of your phone, but clever developers are now taking it forward. Mini Dialer is a great example of this, it puts a phone dial pad right on your watch, so you can quickly get out and take a call without seeing your phone. £1.27. Download Mini Dialer Microsoft's Note Taking app is a worthy Evernote opponent and being able to easily access notes from your wrist is a real-time saver. Voice action includes, so just say 'take a note' and you can start taking that milk later to remind yourself. Or something a little less obvious. Free. Download CityMatchday Wear Google Play Store may be the most obvious place to find all the stuff to stick to your new Android Wear Watch, but that's not your only option. The Wear Store is a collection of all the best apps, games and watch faces, all categorized and easy to find. It features a look similar to Google Play, but the sorting and filtering options have been improved. Free. Download The good thing about the Watch with Wear Store digital display is that you can customize the watchface. Ok, so the API for this is yet to reach developers, but apps like WearFaces – WatchFace Creators let you choose the style created by the app's partner user or build your own from scratch. Free. Download WearFaces Runtastic is a great option to turn your Android Wear smartwatch into a fitness powerhouse. Using the wonders of GPS, Runtastic can track (in real time) your exercise regime, routed you to a personal diary of your workout diary. Free. Download Runtastic WearCalc says it all in the name. This is a calculator app you can use on your wrist, so there's no more access to your pocket for quick calculations. Reminds us of the old Casio watch with all the buttons we always secretly wanted as a child. Free. Download WearCalc adds nothing to the 21st century like a web browser on a watch. Ok, so it might be a little fiddly, but you have to admit, it wasn't that long ago the computers were huge-great behemoths. Internet Browser Wear even has the ability to pinch and zoom, use bookmarks and a mini keyboard for typing. Free. Download Wear Browser still looking for Mr. or Mrs. Right? The Android Wear version of Tinder can just help. Basically it lets you judge people on their look and bio (if they have one) from the comfort of your wrist. It also gives you notifications if a potential lover is in touch. Free. Download Tinder Glamap is a handy Android and Android Wear app that lets you broadcast your location and stay in real time as long as you want, making it easy for a friend or family to get with you. Glanup broadcasts can be sent to text, email, Facebook or Twitter using any device with the web. Free. Download Glamp losing your phone is a nightmare. Luckily the Find My Phone Android Wear app lets you turn on alarm sound or vibration so that you can be quickly reunited. Until, of course, your phone was stolen and the thief is long gone. In which case, you'll need desktop Google software. Free. Download Find My Phone Welcome to our pick of the best Android apps for Creative.
